

Post Disaster Vehicle Damage Report (DA-I-8)

If an agency vehicle is directly damaged by a disaster, for instance if a vehicle is crushed by the falling debris from a building, or if a vehicle is burned in a fire caused by a disaster, we may be able to get a partial reimbursement for the loss from the Federal government.

However, if a vehicle is damaged in an accident as it responds to a disaster, that accident damage may not be reimbursable.

Therefore, we must clearly document the nature of the damage, and how the disaster caused the damage to a vehicle.

In the space below, clearly explain how the vehicle was damaged by the disaster. Include photographs of significant damage. State if the vehicle is operable or so damaged that it cannot be operated.

If the vehicle is inoperable, it must be moved to a holding location for inspection by FEMA. Do not dispose of any disaster damaged equipment until authorized to do so in writing by FEMA.
